LeA.SH
Lernausgangslage 5

Information for Parents

Schleswig-Holstein. Der echte Norden.

What is the goal?

LeA.SH 5 – Learning Situation Baseline 5 – is a procedure that determines fundamental skills of each child at the beginning of secondary school. Teachers get an early, clear picture of the individual competencies in order to tailor their instruction accordingly.

Teachers can use LeA.SH 5 to identify areas where students need support in order to start secondary school successfully. This helps them assist each child in learning as effectively as possible.

After conducting LeA.SH 5, teachers adjust their lessons and support measures to meet the needs of the children.

What is it about?

LeA.SH 5 focuses on linguistic and mathematical skills that every child needs to ensure a successful start to secondary school.

In the language area, children work on tasks related to reading speed, reading accuracy, reading comprehension, and spelling.

In the mathematical area, they work on tasks involving the four basic arithmetic operations as well as geometric shapes.

How and when is LeA.SH 5 conducted?

LeA.SH 5 is carried out across all of Schleswig-Holstein within the first eight school weeks of the 5th grade. The exact days are up to the individual schools.

Each subject takes approximately 35 minutes and is conducted on a computer or tablet.

Children are prepared by teachers that LeA.SH 5 will take place, but no special content preparation is necessary, as the focus is on diagnosing their individual prior knowledge baseline.

No names of children are stored in the system. Only the teacher can assign the results to each individual child.

What happens after LeA.SH 5?

Teachers identify the individual baselines of the children through LeA.SH 5 and then ensure that each child receives tailored support.

The results of LeA.SH 5 do not influence the children's grades.

Contact persons

If you have questions, please contact the teacher responsible for your child.
